Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .65 mm.; diameter at base 9 to 12 mm.; the main branches subdivide 3 or 4 times between the base and summit. Sets of branches from 12 to 30 mm. apart. Branchlets up to nearly 40 mm. long, basal diameter 7 mm. The following are measurements of branchlets: Axial corallites, dimensions as given in table. Walls, thickness somewhat less than one-third the corallite diameter; texture relatively dense; outer surface with distinct, plate-like costules, with synapticulae in the intercostular spaces. Septa in two well-developed cycles; the primaries may meet deep down; secondaries smaller but distinct. Radial corallites unequal, proliferous and non-proliferous, protuberant and immersed or subimmersed. The non-proliferous protuberant corallites attain their full size near the branch ends, within about 5 mm., where they are spreading at right angles or ascend slightly; length 2.5 to 3 mm.; diameter 2 mm.; with a thicker lower wall, a poorly developed upper wall, and a nariform aperture. Lower down the outer end of the lower wall may curve upward, producing a form like half a canoe. Texture reticulate but rather dense; costules distinct, plate-like. Lower still the corallites decrease in prominence, and are nariform, appressed tubular, or labellate, merging into immersed corallites. Directive septa distinct, other primaries small, secondaries inconspicuous or absent. The protuberant corallites grade into tubular, proliferous corallites 4 mm. long and 2.5 mm. in diameter, which in their turn grade into branchlets. In these the primary septa are well developed and often a few secondaries are distinct....
